

PROBLEM STATEMENT #59 | Media, Events & Community

Community Lost & Found Matching Network

1. Problem Context & Overview

A lost-and-found community network that extracts visual and text item tags, runs geo-proximity matching between lost and found items, and requires proof-of-ownership question verification.

Target Stakeholders / Actors: *Finder / Owner, Community Admin*

2. Sample Functional Requirement (FR) Guideline

Sample Requirement: FR-001 [Priority: High]

Description: The system shall match newly logged 'Found Item' posts with active 'Lost Item' reports based on category, color tags, and location radius.

Sample Acceptance Criteria: Pass: Match probability calculated and notification dispatched to potential owner; Fail: Incompatible item categories matched.

3. Sample Non-Functional Requirement (NFR) Guideline

Sample Requirement: NFR-001 [Type: Performance & Security]

Description: Claimants must answer private security questions set by the finder before item handover contact details are revealed.

Sample Acceptance Criteria: Pass: Benchmarking tests confirm target latency and security standards under simulated peak load.

Deliverables to Submit: [All through a GitHub Repo in your account]

- **Complete Requirements Table:**

- >> Exactly 5 Functional Requirements (FR-001 to FR-005)
- >> 2 Non-Functional Requirements (NFR-001 & NFR-002) with ID, Type, Description, Priority, Acceptance Criteria, and Rationale.

- **UML Use-Case Diagram:**

- >> Model all actors, primary use cases, and include at least one «include» and one «extend» relationship.

- **Use-Case Flow Specification:**

- >> 1-page document for one core use case detailing Preconditions, Postconditions, Main Success Scenario
- >> One Alternate Flow.
